                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              OM protein - protein search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         length: 2000000000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            length:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Match Length

Requence 34, Application US/09227721

Patent No. 637950

GENERAL INFORMATION:
APPLICANT: Alnemri, Emad S.
TITLE OF INVENTION: RECOMBINANT, ACTIVE CASPASES AND USES
TITLE OF INVENTION: THEREOF
FILE REFERENCE: 480140, 431

CURRENT PILING DATE: 1999-01-08

NUMBER OF SED ID NOS: 116

SOFTWARR: FASTSEQ for Windows Version 3.0

LENGTH: 290
TYPE: PRT
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Rev-Caspase-3 constructed from human caspase -3

```
The present sequence is the CPP23beta or Glu190 isoform of the inactive CPP32 proenzyme (a member of the interleukin converting CC inactive CPP32 proenzyme (a member of the interleukin converting CC enzyme/pro-apoptotic protein CED-3 family of cysteine proteases of CC unknown function cloned from Jurkat cells), the proteolytic product CC of which is the polytop-ribose) polymerase (PARP) protease.

CC apopain. The PARP cleavage enzyme was purified from the human CC monocytic leukaemia cell line, THP-1, using standard ion exchange CC correct corr
                                                                                                                                                                                                                                                                                                                                                                           Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human pro-Yama (AAW00677) is a zymogen which upon activation cleaves PARP to an 85 kDa form. Activated Yama has the ability to modulate cellular function associated with the Fas receptor pathway such as Fas-associated apoptosis. This activity is inhibited by CrmA (see also AAW00678). The pro-Yama sequence was deduced from a cDNA clone isolated from human umbilical vein endothelial cells. Yama can be produced in a host cell and used to modulate cellular function, to raise antibodies, or to screen for agents or drugs which modulate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New nucleic acid encoding Yama protein or CrmA mutant -modulating apoptosis, maintaining {\tt T} cell viability in Al and for drug screening

RESULT 4
AAW41688
designated YAMA. The specification describes a novel method of controlling cell functions controlled by the tumour necrosis factor receptor (TNF-R) pathway containing U1-70. The method comprises introducing a nucleic acid molecule encoding CrmA into a cell, and culturing the cell under suitable conditions for transcription and translation of the CrmA nucleic acid. Method for preventing and inhibiting apoptosis by inhibiting activation of the U1-70 path, identifying the chemical related to the apoptosis path, and screening candidate chemical having biological function in the apoptosis path a also described. The methods can be used to identify substances which modulate apoptosis in cells controlled by the TNF-R pathway.
                                                                                                                                                                                                                                                         Controlling apoptosis by inhibiting activation of the U1-70 pathway - by introduction of nucleic acid encoding protein with CrmA biological activity into the cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CrmA; tumour necrosis factor receptor; TNF-R; U1-70; apoptosis; activation; U1-70 path; apoptosis path; id

The present sequence is the CPP23a or Asp190 isoform of the inactive CPP32 proenzyme (a member of the interleukin converting enzyme/pro-apoptotic protein CED-3 family of cysteine proteases cunknown function cloned from Jurkat cells), the proteolytic prod of which is the poly(DP-ribose) polymerase (PARP) protease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CPP23a; isoform; inactive; CPP32; proenzyme; cysteine; protease; proteolytic product; poly(DP-ribose) polymerase; PARR; apopain; cleavage enzyme; human; monocytic leukaemia; cell line; THP-1; identification; modulator; recombinant production; gene therapy; pro-infiammatory; pro-apoptotic; apoptosis; inflammation; antibody; antisense DNA; treatment; immune; proliferation; degeneration; disease; AIDS; acquired immunodeficiency syndrome; autoimmune; pathogenic infection; cardiovascular; neurological; injury;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        apopain. The PARP cleavage enzyme was purified from the human monocytic leukaemia cell line, THP-1, using standard ion exchange chromatography techniques and SDS PAGE. Apopain can be used to identify apopain activity modulators, while apopain encoding DNA may be used for apopain production or in gene therapy (i.e. in vivo or ex vivo gene transplantation) for enhancing the pro-inflammatory or pro-apoptotic effects of apopain. Anti-apopain antibodies and antisense DNA can be used to reduce or eliminate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Cells transfected with a rev-caspase expressing vector can be used in identification of inhibitors or enhancers of caspase-mediated apoptosis. In vitro translated rev-caspase can be used to identify an inhibitor or enhancer of caspase processing activity. Caspase inhibitors are useful for treating neurodegenerative diseases as well as for inhibiting apoptosis in the heart following myocardial infarction. Sequences AAX81217 -AAX81226 represent human caspase genes encoding caspase 1-10 gene products (AAY21715-Y21724).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Rev-caspases are cysteine proteases that specifically cleave proteins after Asp residues and is expressed as a zymogen, in which the small subunit is N-terminal to a large subunit. A gene delivery vehicle comprising a rev-caspase coding sequence is useful for the treatment of cancer, where the gene delivery vehicle is internalised by tumour cells. The gene delivery vehicle can also be used to treat autoimmune diseases.
                                                                                                                                                                       Human; caspase 3; viral infection; l

The caspase 3 antisense oligonucleotides specifically hybridise with and inhibit the expression of caspase 3. Antisense compounds targeted to caspase 3 are useful to inhibit caspase 3 expression in cells or tissues and to modulate apoptosis. The caspase 3 antisense oligonucleotides are useful for treating disorders associated with expression of caspase 3.

Caspases are a family of cysteine proteases, ct that participate in the initiation and execution of apoptosis. Caspases ce exist as pro-enzymes, activated by cleavage into a large and small correctly pro-enzyme sequence. The present invention relates to a method for curional cloning of genes encoding proteins or enzymes involved in correctly cleavage. The invention is based on the use of caspase expression cassettes comprising the coding sequence of a proteolytic cleavage in the invention is based on the use of caspase expression cassettes comprising the coding sequence of a proteolytic cleavage site flanked by sequences encoding two caspase subunit. A cc cleavage site flanked by sequences encoding two caspase subunit, and company of the comprising a first and a second caspase subunit. Cc cleavage site containing a first and a second caspase subunit, and company of the containing gene encoding enzymes involved in proteolytic cleavage. An occ mutant cell line deficient in an enzyme of interest and is also useful cc call genes and caspase subunity a mutant cell line deficient in an enzyme of interest and is also useful company of the containing fusion polypeptide (e.g. Cathepsin B course) is used to interest and is also useful contained by overexpression of a polypeptide (e.g. Cathepsin B course) is used to interest and is also useful contained by a case of the containing fusion polypeptide (e.g. Cathepsin B course) is used to interest and is also useful contained by a case of the course of the contained by a case of the containing fusion polypeptide (e.g. Cathepsin B course) is used to interest and is also useful contained by a case of the course of the course c
